**DETAILED ACTION**

This Applicant has been examined. The claims 1-19 are pending. The examination results are as following.

***Reasons For Allowance***

The following is an examiner's statement of reasons for allowance: The present invention is directed to display device comprising a display panel including a plurality of scan electrodes arranged in the column direction and a plurality of data electrodes arranged in the row direction of a screen, comprising a line sequential addressing for controlling potential of the data electrode in synchronization with row selection by individual potential control of the scan electrode. The closest prior art, Tomio et al. (US patent 6,522,314) and Ide (US patent 6,333,738) and Sano et al. (US patent 5,717,437) show a similar display system having a plurality of data electrodes arranged in the row direction of a screen and a driving circuit for controlling potential of the scan electrodes and the data electrodes in accordance with binary display data. However, they fail to teach that when n-th display data as well as (n+1)th display data are different between the neighboring data electrodes and n-th display data are different from (n+1)th display data in each of the data electrodes, stored charge due to capacitance between the neighboring data electrodes is discharged by connecting one of the data electrodes to a power source line and by connecting the other data electrode to the power source line via a forward direction diode before switching the potential corresponding to the n-th display data to the potential corresponding to the (n+1)th

display data as claim 1. The reasons for allowance of claims 2-19 have been conveyed to the Applicant in the previous Office action.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
